

Statement of Qualifications – Project Profiles

Project: **Framework for Legacy Remediation
Russian Oil and Gas Company**

TREC assisted the client with establishing a provision to fund remediation of environmental liabilities that pre-dated conception of the company. TREC personnel developed a system in which the subsidiary companies applied for funding from the provision to remediate their legacy environmental liabilities. The remediation methods and results within the

Another reason behind the highly variable remediation results was a lack of contractor oversight. To address this, TREC personnel developed a QA/QC process to ensure that the remediation contractors followed the Remediation Standard through all stages of the remediation work.

While the remediation work was in progress, TREC personnel made site visits to evaluate remediation effectiveness and to audit the contractors. Inefficiencies and poor practices were noted and corrected, and this information was used to make changes in policy and educate the environmental managers, ensuring an ever-improving system of environmental remediation.

SERVICES PROVIDED:

- Corporate standard development
- Business process development
- Contractor evaluations
- QA/QC process development

company varied widely. To address this, TREC personnel developed a remediation standard to be used by both the environmental managers and the remediation contractors.
