

Statement of Qualifications – Project Profiles

Project: **Strategic Environmental Planning
Russian Oil and Gas Company**

TREC personnel assisted the client's environmental managers with preparation of a strategic environmental plan, cost estimates and environmental liability evaluations. The facilities evaluated included water treatment plants, flares, tank farms, pipelines, water crossings, oil waste pits, oil spills and miscellaneous industrial waste disposal sites.

The evaluations were used to quantify potential environmental liabilities, understand the regulatory requirements, develop various environmental planning scenarios and prioritization schemes to address the potential liabilities. A long range plan was prepared to identify all upstream and downstream liabilities, media of concern, estimated unit costs for environmental compliance and total costs. The costs were developed for various regulatory compliance scenarios and corporate policy requirements.

SERVICES PROVIDED:

- Upstream and Downstream Facility Site Evaluations
- Environmental Controls Alternative Evaluation
- Cost Estimates

Oil Waste Disposal Pit

Recommendations for addressing potential liabilities were prioritized based on developed risk criteria and a schedule for implementation was developed for one, five and twenty year plans. The implementation schedule and estimated costs were leveled to balance cash flow across the five year and twenty year periods.
