

## Statement of Qualifications – Project Profiles

**Project:** Wetland Delineation and Stormwater Management  
Butte, MT

TREC personnel were contracted by a developer to perform a wetlands delineation, develop a storm water erosion control plan and assess the need for various permits on a property that was to be developed. The majority of the proposed site was covered with wetlands, and a creek crossed the center of it.

Through TREC's guidance, the developer was able to construct his facilities so as to minimize the disturbance to the wetlands, and to maintain an adequate distance from the creek. This saved the contractor from the necessity of obtaining a: 404 Permit (Clean Water Act); Stormwater Discharge Construction Permit; Floodplain Development Permit or a 310 Permit.

### SERVICES PROVIDED:

- Wetlands delineation
- Storm water erosion control plan
- Permitting based construction input
- Wetland and water-body permit evaluations
